IPMS - Integrated Particle Monitoring Systems

The IPMS measures particle concentration in real-time, monitoring the cleanliness level 24/7. The display indicates whether the cleanliness level complies with ISO 5 and alerts when the workspace has been contaminated or needs to be serviced.

IPMS provides critical real-time information on the air quality within the workspace, prevents cross-contamination, and ensures constant compliance with relevant standards.

The IPMS is an unprecedented solution that can transform the future of biological processes in the industry.
